Virtual Event

Community Stream Webinar

Thought Leadership

Insight/ Discussion Paper

Leadership Event

Live or virtual - Members only

OVERVIEW

What makes a good healthcare building? This strand explores how to get the best out of the design process, including:

- Brief development
- Engagement
- Clinical perspectives, and
- Health Planning.

Context

Great projects come from good briefing. So what makes a good brief for both clients and design teams?

Our virtual roundtable will debate the strength of briefing documents in the UK, Northern Ireland and internationally; explore lessons learned from recent design competitions and consider best practice briefing from the perspective of designer, clinician and client perspectives.

Panel discussion + Q&A session.

Findings will be collated and developed into a Thought Leadership discussion paper with results shared at our Members-only leadership event.

Thought Leadership

Insight/ Discussion Paper

Leadership Event

Live or virtual - Members only

OVERVIEW

How do we build better? This strand explores the latest thinking in:

- Procurement
- MMC
- Digital transformation
- The road to Net Zero.

University of Huddersfield*

Context

How do we build a sustainable NHS estate? Delivering on the promise of COP26? Our community stream webinar will explore a range of perspectives, including:

- The view from the centre: how do the Government, and NHSi intend to turn this promise into reality? Does our technical guidance, encourage, enable and challenge design teams to deliver genuinely sustainable design?
- The contractor's perspective: what are the barriers to delivering a zero carbon estate and how can we overcome them?
- MMC as a philosophy: what should - and could - be standardised and how do we ensure standardisation delivers on design quality - not just cost efficiency?

Findings will be collated and developed into a Thought Leadership discussion paper with results shared at our Members-only leadership event.

Leadership Event

Live or virtual - Members only

OVERVIEW

How do we create healing environments that support recovery and wellbeing.

- Designing for recovery - mental health
- Integrated Care Systems and the role of the community in diagnosis, treatment and recovery
- Benefits of biophilic design.

Context

What makes a healing environment? Our webinar will explore innovative examples of patient centred design which deliver better patient outcomes - whether that be through improved recovery times or a more positive patient experience. Examples will be drawn from a range of settings, in the UK and internationally - including:

- Intergenerational / elderly care (IBI - North America)
- Biophilic Design (Singapore)
- Alternative approaches to healthcare design and provision (Japan)
- Mental Health recovery (Scandinavia/ Western Australia?)
- Private and complementary healthcare providers - are there lessons to be learned from the (Circle/Spire) patient experience; concepts that could transfer from therapeutic (non-acute) to acute environments (Maggies)?

Findings will be collated and developed into a Thought Leadership discussion paper with results shared at our Members-only leadership event.
